What's New In AutoCAD?

You can quickly import markup data into any drawing from printers, scanning devices, cloud services, and other external storage. With Markup Assist you don't have to worry about modifying or creating additional drawings. You can add more detail to your design and have AutoCAD wire that

information into your drawing.
Multi-Device Support: AutoCAD
now supports the drawing of
multiple devices, including the all-
new Surface Pro, Surface Book,
Surface Book 2, Surface Pro 3,
Surface Pro 4, Surface Laptop,
Surface Book 2, Surface Studio,
Surface Pro, Surface Pro 4, Surface
3, Surface Pro, Surface 2, Surface
Laptop, Surface Studio, and
Surface Book 1. AutoCAD can be
used to communicate with external
cameras, cameras integrated into a
projector, and more. You can even
use it to design products that are
integrated with external devices.
For example, you can use
AutoCAD to design and publish a
smartphone or tablet app that

communicates with other devices. Simplified Creation of Dynamic Parameters: AutoCAD has a new way to create dynamic parameters that can change and react to what you're doing in the drawing. Dynamic parameters are just like any other object in a drawing, except that they can be customized and changed to suit your particular needs. You can create a dynamic parameter that displays the current temperature in your drawing or offers a new way to place your graphic objects on your design. For example, if you're designing a new building, you can create a dynamic parameter that changes the size of the structure as you enter your design and you can change the wall

materials as you work. SketchFlow is a new tool that lets you quickly create live components and sketches for use on mobile and desktop devices. Simplified Drawing Creation: In previous versions of AutoCAD, there were many ways to create drawings. Now, you can save time by drawing with the DWG/XML editor. You can also import DWG/XML files into drawings using SketchFlow. A new Set Reference Object command speeds up the creation of drawings by simplifying the creation of topographic maps. You can use a new Choose Object command to easily identify the location of the same object in multiple drawings. For example,

you can use this command to choose the same sewer valve used in many different drawings without manually updating the coordinates.
