\*\*\*\*\* I've been using this app for almost 2 years, and it is an outstanding tool. For better navigation and display of the Bible, the printed format is most often better suited. A good approach is to just look at the bottom of the page and pick the best part. As for the kink in the scrolling, it doesn't bother me as I do have a big screen. However I have friends with normal sized screens and the same problem. I found that sometimes when I am typing, it will scroll to a different verse that it thinks is one I am not typing, so I have to open the scroller and select it to make it stop. The only real downside is if you read the Bible without the dictionary, it won't scroll as well. There is also one other catch, some of the pages are a bit distorted (as seen above), so there is no need to use that page unless you want to look at it in detail. Bible Companion has been a lifesaver for me and I highly recommend it to anyone that needs to read the Bible in a different manner than the traditional method.
