If you like QuickChord, please make a donation. Thanks. Chord diagrams are a great way to express chords for guitar players or vocalists to use when performing a song. QuickChord supports the standard guitar chord symbols (G, D, A, E, G, B, D, E, G, B, D, E, and F) by using chord diagrams to express the chord progressions found in many songs. The chord diagrams in QuickChord are generated automatically from songs. For more chord diagrams, simply create the chord diagrams you want and use them as you please. Just to make it very easy to create the diagrams, I added the ability to search your guitar library for a song that contains the chords you want, or one of the chords you want can be any MIDI note. Once a song's chords are found, the QuickChord program creates the guitar chord diagrams for you. Once a chord diagram is created, you can crop it or copy it to the clipboard, change the color of the chords, or create a guitar chord diagram as a graphic that you can use in any program that allows you to insert graphics. It is very easy to use QuickChord. Chord shapes are placed in the program automatically. You just have to create the guitar chord diagrams you want. Press and hold a shape, then move it around to create a desired chord shape. You can also select the shape that you want, then use the copy shortcut or click the chart to the clipboard to create a guitar chord diagram. You can use it to make your own guitar chord charts for songs and your own chord tablature, as you can see in the example below. Now you can take guitar chord diagrams and place them into any program where you can insert graphics, such as

Quick QuickChord is a simple but powerful chord diagram program. There's one chord at a time. Easy, fast, and fun to use. Once the chord diagram is done, you can save it as an image or save it as a vector graphic and use it on the web or in your documents. There's over 200 chords included. The chords are organized by keys. Use the drop-down menu to add the chords you need. Overview The program is designed to be easy to use. You can: ● Create Chord Diagrams In the main area, you can use the chords that are already loaded. To create new chords, click + to open the chord creation screen. The first thing to do is to select the root note from the diagram. The program will then automatically calculate the chord, and then you can use the slider to set the shape of the chord. Notes: ● If your root note is off, you can change it with the Note in Circle button. ● The Circle button lets you add any note to the chord. The selected note is automatically placed in the circle. ● To change the position of the notes, click on a note and move it. You can drag the note to reposition it. ● To change the notes of an existing chord, click on one of the notes. A list of other notes appear, allowing you to select from multiple options. To make an additional edit to the existing chord, click Apply Changes. ● To export a chord diagram to a vector graphic, click on Export and select SVG, JPG, PNG, or GIFPDF. ● Export the chart as an image; ● Export the chart as a.css stylesheet for use in a web page. The stylesheet includes the styles you've defined. ● The chord diagram is compatible with Microsoft Word. Save the image as a page in the Office Suite; ● Export the chart as a.html web page; ● You can select a path in the diagram that the chord diagrams will follow on import into other applications. To do so, click on the Path button. Set the start point of the path and an end point. The path will be drawn from the start point to the end point and added to the document where you have the chord diagram; ● You can set the location of the chord diagram to appear outside

QuickChord is your one-stop-shop for creating awesome looking guitar chord diagrams. QuickChord is designed to be a very straightforward tool for quickly generating guitar chord diagrams using an interactive online editor that can be used offline. You can save your new guitar chord layout chart by clicking the Save button on the bottom left of the chord chart window. Please note: It is possible to get errors while saving a guitar chord diagram. Let me know if you have any suggestions! Facebook: Youtube: You can support my channel by searching for RealQuick Chords in the Apple Itunes store. QuickChord helps you build guitar chord diagrams that can be used in any program that allows you to insert graphics. I've been looking all over the place for a simple app that lets me create guitar chord diagrams that I can paste into a web page or Microsoft Word document. There are lot of great programs out there for guitar players to create tabs and complete sheet music, or to enter notes on a virtual fretboard to find matching chords, but nothing that would let me just click on a chord chart and let me save the chart as a graphic. QwickChord Description: QuickChord is your one-stop-shop for creating awesome looking guitar chord diagrams. What's New in the?

QuickChord helps you build guitar chord diagrams that can be used in any program that allows you to insert graphics. You just have to upload chords you know or create your own! Once you have all the chords (tempos are optional), QuickChord creates 3 different guitar chord diagrams, one for the lower strings, the higher strings, and the full string. All the chord diagram can be embedded into documents with 3 different instructions: (1) Copy and paste the chart, (2) Compose a smart link, or (3) Create a hyperlink to a guitar chord page. You can customize anything about the chart including colors, fonts, and special effects. Every chord diagram is a unique graphic! [Chord diagram (low strings)] [Chord diagram (higher strings)] [Chord diagram (full strings)] Also check out other guitar tabs and chord maker programs.
