Looking for a better video calling experience? Look no further than Skype Preview, a brand new app that was developed by an active collaboration between Skype Technologies S.A. and Microsoft. Based on the high-tech Universal Windows Platform, Skype Preview is brand new app built from scratch to provide you with a plethora of communication possibilities and perfect integration with your Windows 10 PCs and mobile devices. RIGHT OFF THE BAT: Since it is a Microsoft Store app, installing it on your PC can be accomplished with no more than one mouse click, since it is automatically deployed and does not require any type of configuration on your part. As expected, you have the possibility to log in using your official Microsoft or Skype username and password. Once logged in, you can instantly tell that this is way different (and better) than the older Skype client we have been accustomed over the past years, that offers support for the preceding iterations of Windows. More than a different user experience: - THE NEW ONE: The first thing that stands out is, of course, the application's slick and black-themed redesigned interface. - SIMPLE SETTINGS: After just a couple of seconds of fiddling about with the app, you are also bound to discover other improvements over the old version of Skype, namely how quickly everything is loaded, how very little lag is present, how fluid all the in-between menus animations really are, not to mention the native, eye-catching Windows 10 notifications. - MORE THAN A DIFFERENT USER EXPERIENCE: The layout is also quite different, with all the main features easily accessible from the app's left-sided and simplistic toolbar, making the whole user experience with Skype much more enjoyable. - NO STRINGS ATTACHED: It does not take long to figure out that this layout is actually much more user-friendly and more geared towards the conversation, more than anything else. That all said, you can effortlessly access the Recent Conversations, Contacts, Settings and Bots sections, as they are always within arm's reach. - SPEED, EASE AND ECONOMY: Skype now has Bots that you will either adore or absolutely hate. - EMOTICONS: The latter section is quite interesting as Skype now offers bots for Bing Images, Bing Music, Bing News, Getty Images, two 'Hello Stranger' games and a Summarize bot that will feed you the most relevant information about certain topics, with more bots to come
