Enquiry about This Package What is included in this Bundle? Description Smk Dock icons is a collection that will provide you with icons for your system shortcuts, including browsers and media. The pack includes icons in png format, at a dimension of 100X100, as well as icons in ico format. Try them!If you have an iMac you know that you can charge the battery with a PowerAdapter. Sometimes the adapter dies so the MacBook Pro can no longer charge the battery. The MacBook Pro does not have a full charger but you can buy an adaptor to allow you to charge the battery. But what if the battery is damaged or completely dead? You could try the regular MacBook Pro charger but it does not have the correct voltage. That's why the MacBookPro has a battery charger. Why is the battery charger not on the MacBook Pro? The battery charger is on the logic board so it is logical to conclude that it is connected with a small cable to the mainboard. The cable to the logic board is soldered to the mainboard. There is no visible connection between the logic board and the battery charger. How to fix the problem? You need to remove the battery and the logic board. For this you need the MacBookPro in the repair mode. First remove the battery. Then turn off the MacBookPro To get into repair mode press the "F1" key. a screen with the text "Repair" should appear. After pressing the F1 key you need to press the option key (option to left of F1 key) and the letter "r" to enter the repair mode. If you don't have the F1 key it should be on the bottom of the keyboard. Press the shift key and the letter "p" to see the combo menu When the MacBookPro is in the repair mode press the "alt" key and the "-" key to enter the combo menu. In the combo menu, choose "Repair". When the MacBookPro is in the repair mode the battery should be on the left side of the logic board. The cable to the battery should be visible. Start the MacBookPro Turn the MacBookPro on Power the MacBookPro until it stops working Start the MacBookPro again You should now see a screen with a battery indicator. If you want to have an "apple battery" you can use the "Apple Battery Connector" to charge the battery. The "apple battery connector" is described as a "battery socket". I would love to get your suggestions for future articles. For example: maybe the MacBook Pro is misbehaving, or
