

The best version of Photoshop CS6 I have seen with all updates incorporated. 1. Click on Apply to get the same update to your already . If you are a customer use your serial number in the serial number field. Photoshopcs6 Serial Number Crack.Q: Bootstrap-Vue with @click.stop not working I am using Bootstrap Vue.js with the button @click.stop, but it seems that it does not prevent the next click event to fire, unless I remove this. Also noticed that the class 'active' does not appear on the button until the initial click. It should be class="active" from the get go. HTML {{ order.amount }} \${{ order.currency }} JS data: () => ( { toggle: false } ), watch: { toggle: function () { this.toggle =!this.toggle; console.log(this.toggle); } } A: I think you don't understand how the @click.stop works here {{ order.amount }} \${{ order.currency }} From the documentation: Using the class stop will stop the current event from propagating. If you have multiple event listeners for the same event, only the last listener to add the stop class will be affected. This is great for situations where you want to only stop a single event propagation for a given element. If you need to disable multiple event listeners, use the shorthand on event handler and the corresponding stop class. So, because you have only one listener you need to use that one as it is the last one. {{ order.amount }} \${{ order.currency }}
