Manually input the aircraft address and click to plot it on the map. You can move the aircraft around in the map by clicking and dragging. You can zoom in the map and out with the zoom tool. Key Features: - AirNav (ACAR) - GACAR - DFCS - OBI - GACAR Mode III - Quickly set and save as ACARS address to be send when you launch the program (using an XML template) How to Use: How to use this AirNav ACARS receiver/decoder software: 1) First of all, you need to install and test the software (client or server) with an AirNav GPS receiver. It should work fine with any AirNav receiver. 2) Before launching the software, you need to configure the settings. First, you need to open the AirNav in a fixed mode. 3) Open the config.xml and set your AirNav PC-HFDL, ACARSD, ACARSD2, or JACARS address. You can get this information by clicking the [Start] button of your AirNav receiver. 4) You will get an XML template for the settings. After you set the address, save it and launch the software. 5) You can zoom in and out on the map with the tool (the 'Zoom in' or 'Zoom out' buttons) 6) You can move the aircraft around the map with the cursor. 7) The aircraft is moved in such a way that the aircraft's position remains almost the same as you change the map size. So, you can zoom in or out to view more or less of the aircraft. 8) When you change the map size, the aircraft will be shifted to the right or left of the map's original position to keep the aircraft's position on the map. 9) The aircraft is always shown in the center of the map. 10) You can change the scale of the map. When you change the scale, the aircraft will be zoomed in and out. Download the latest version from the link below. (2.0 is out now) 1) Download the latest version from the link below. (2.0 is out now) 2) Unzip the files. 3) Click 'Install and Ready to Run' 4) The setup window will appear, and you will be asked to accept the

Accurately determines the location of airborne objects within the context of the available geo-spatial information and performs an automatic correlation with the compatible global position solutions of the target. The system offers an accurate Automatic Deterministic Method (ADM) based on GPS time and space positioning techniques for A/GPS/GLONASS satellites. In addition, it offers a real-time monitoring service for aircraft, ships, and UAVs that are equipped with ADF and A/GPS/GLONASS receivers. The system also offers an extension of the ADM for marine vessels with an integrated GPS and SPS. Finally, the system also provides reliable location results for airborne objects and aircraft that are equipped with ADS-B or ADS-R data transmission. Our test site and our multiple set ups were usually very poor. We switched providers just to get a sense of where we were located but could never be assured. I switched to Beacon for our needs and have had great success. Beacon is very knowledgeable and knowledgeable. They are a pleasure to deal with.
