XML rendering extensions (eXtensible Markup Language or XMLExtensions) XML rendering is one of the newer extensions to the .NET (Integrated development environment) API. It allows access to the drawing data as XML files, specifically DWG, DXF and DGN files. This extension is driven by the MIT Software Systems (software@mit.edu) project. Other notable features include the possibility of displaying parameter, style and annotation information with visual themes. XML rendering is dependent on the XML rendering engine installed on the computer. The default rendering engine is Open XML SDK. Microsoft Office 2007 and Microsoft Office 2010 contain the Open XML SDK 2.0 for rendering DWG and DXF files.
