A: I have not used it but using the link provided - Rapidshare offers a 60-day trial version of XLSTAT for download. I have only used XLSTAT once and have never used a standalone version of XLSTAT. For Free Download Full Version XLSTAT 2020.1.65144 Crack + Keygen Key Free Download 3 Build 22.3.11 (64-bit). So the short version is to download the trial version and then after 60 days, simply download a new version. At least this is what I did and how I got around the problem. Good luck with your XLSTAT project and hope this helps.

Q: Fastest way to generate an n -bit prime with Eratosthenes sieve? To generate prime numbers between 2^{12} and 2^{15} (inclusive), I'm using the Eratosthenes sieve. However, the output run time is too slow for my needs. It's taking about 0.2 seconds (it actually varies a little) to generate a 2^{15} number -- I need it to be a minimum of 2 seconds. Is there a faster way to generate these numbers?

A: You can get a list of primes below 2^{15} in $\log n$ time by taking the product of all the prime numbers up to $2^{15}-1$. If you wanted to make sure it is prime, a simple check is to test that the n leftmost bits are all ones. You can test this by looking at $n-2^{15}$ as a multiple of 2^{15} , and see if the last two bits are ones.

Q: how can i replace a string in a file except containing a specific string? I have a file with many "nodes". I need to change the parameter x from 5 to 4 except for one node where this parameter must be $x=4$. Is there any way to do this with sed? example of content of my file: I need to change the $x=5$ to $x=4$ and $x=9$ to $x=4$ except for $x=4$ and $x=2$.
