CUDA is the C programming language for parallel computing using a NVIDIA graphics processing

unit (GPU). CUDA allows developers to write applications that utilize the power of the GPUs in order to accomplish tasks that could not be done efficiently by a CPU alone. CUDA programs can be compiled to run on CPUs, GPUs, and many different combinations of the two. What's New in the AutoCAD?

Simplify the design review process. Connect the pen, smart phone or tablet to your computer or mobile device and instantly view and comment on new designs in AutoCAD as you work. View and comment on your designs as you edit in other applications and on the web. In addition to new features, we've also made significant improvements to existing features in the new release. In this overview of the new features, we'll take a look at how new features connect to each other. Pen and Smart Device Support for Commenting and Review Connecting a pen and a smart device, such as a tablet or smart phone, to your computer is like having a second drawing surface to edit on as you work. Using AutoCAD's new features, you can preview new designs, instantly review your annotations and comments, and instantly connect to peers via comments. You can also send comments and annotations to colleagues who don't use AutoCAD or other CAD software. Add annotations and comments to a drawing Add annotations and comments directly on the drawing canvas using a pen and a smart device, such as a tablet or smart phone. As you mark up a drawing, you can check the results and send the file for a peer's review and feedback. (You can send comments for a review of your own drawings. You can also send comments to others who don't use AutoCAD.) Connecting to your smart device If you connect to your pen and smart device, AutoCAD creates an easy-to-use annotation interface that allows you to add comments, annotations and other text to the drawing canvas. The new commenting interface lets you review your work and give immediate feedback to the drawing. Send the file for peer review If you have access to the file, you can send the drawing for peer review. Sending the file for a review is just as easy as sending a document to another person: you use the email app on your smart device to send the file for review. You can also send the file directly to a mailing list or other email distribution list. Peer review Peer review allows you to invite colleagues to review the drawing. Other users can view your annotations, comments and drawing on the screen or in print. You can even send a link to a drawing on the web. Mobile device support You can use your mobile device to send annotations, comments and reviews
